

D-CAB

The innovative prophylaxis against
milk fever

D-CAB – as an innovative **prophylaxis against milk fever** (hypocalcaemia) „D-CAB“ supports you to balance the **cations-anions-balance** at dairy cows. The control of the ration of anions happens through the identification of the urine-ph-value and can be a measure of the monitoring system in herds.

GMO-free

Excellent sources
of chloride and
sulphur

Good palatability
= high feed
intake

Supplies crude
protein

- ▶ **!** *The identification of calcium-, natrium-, potassium-, chlorine- and sulphur-values of the house-made feed (DCAB) ist the basis of the application of „D-CAB“ and is necessary in all preparing rations by a livestock feeding adviser.*
- ▶ Test strips will be provided by your SN-feeding adviser.
