## RUPPINER DARM-BALANCE

To compensate for chronic digestive disorders of the large intestine

Supports the balance of the gastrointestinal tract

Suitable for horses with faecal water

Promotes water retention

Compensation for chronic digestive disorders of the large intestine

As a feed supplement, Ruppiner Darm-Balance supports fluid retention in the gastrointestinal tract. Stressful situations such as transports, tournaments or stable changes can cause horses to react with digestive disorders. To restore the balance of the gastrointestinal tract, the addition of special nutrients that regenerate the water content and balance can be helpful. By using prebiotic algae, a regulating effect on the intestinal flora and thus also on the faecal consistency can be achieved. Another positive effect is the support of intestinal peristalsis, thus also promoting the processes in the large intestine area. Only a functioning mucous membrane can absorb sufficient amounts of water. Ruppiner Darm-Balance starts at this point and supports the stabilisation of the digestive processes. It also contains specific essential oils that act in a natural way. Beta-glucans are complex dietary fibres and promote the body's own defences. The feed is particularly suitable for problems with faecal water. However, a veterinarian should be consulted for horses with acute diarrhoea.

**Feeding recommendation:** This supplementary feed should be fed at 10 g / 100 kg body weight / day. For a large horse (600 kg) this corresponds to an administration of 60 g / animal / day. The use is especially recommended in case of faecal water. The feeding recommendation refers to a roughage intake (hay) of 1.5 kg per 100 kg body weight and day. We recommend feeding Ruppiner Darm-Balance on a long-term basis or until the problem has been solved. Note: Ruppiner Darm-Balance is NOT suitable for animals with acute diarrhoea. One measuring spoon corresponds to approx. 20 g.

**Composition:** Pea hulls, alfalfa meal, linseed, extruded, wheat bran, extruded, grape seed meal and grape pomace, dried, sugar beet molasses.

**Analytical ingredients and contents:** 10.3% crude protein, 8.3% crude fat, 18.6% crude fibre, 3.0% crude ash, 4.2% starch, 0.66% calcium, 0.33% phosphorus, 0.05% sodium, 0.23% magnesium

**Packing:** 3 kg bucket / 500 g
